

SolrSharp

Jeff Rodenburg created a C# API for interoperation with Solr. The API supports:

- Adding, updating and deleting documents from a solr index.
- Configuration support for multiple solr instances.
- Flags for Read/Write modes in support of solr replication.
- Search queries that return strongly-typed objects
- Support for facets

Update December 30 2007:

[SolrSharp](http://www.codeplex.com/solrsharp) has a new home @ <http://www.codeplex.com/solrsharp>. The source code is available through the codeplex repository, as well as a zipped distribution. Please use the discussion forum and other services at <http://www.codeplex.com/solrsharp>.

Many thanks to the Solr community for initially giving us a home here on the Solr wiki and to Ryan for hosting the source code under subversion.

Comments, if you use solrsharp with newer version of solr , you may get the object null reference error. Object reference not set to an instance of an object. check this out. <http://androidyou.blogspot.com/2010/09/solr-csharp-net-client-solrsharp.html>

[SolrSharp](#) seems to be unmaintained. The last commit was in June 2009, last release was December 2007. The project has been [forked and updated here](#) Or [zetaclear](#). Alternatively, use [SolrNet](#), another Solr client for .NET
