

DevFAQ

- Voting process

Generally casting a vote can be done with +1/ -1 (<http://www.apache.org/foundation/voting.html>), pressing the vote button **Voting this issue** in jira page is preferred as it can be tracked and monitored.

- Svn trunk is frozen before a new version is released

[Procedure](#) in releasing a new version usually takes time before it passes the voting. And before passing the voting process, rollback is possible; therefore, it is important to keep svn trunk clean.

- Can't build the TRUNK - cmake "CMAKE_CXX_COMPILER-NOTFOUND" error

It means that you don't have the build tools installed. Run the following command: `sudo apt-get install build-essential -y`
