

ImplementsInterface

Name

Implements Interface

Intent

There are multiple implementations of a particular interface and more implementation to come. New classes should be able to be instantiated without changing the configuration rules.

Sample Code

```
<chain-element  
  className="com.package.ThirdChainElement"  
  visible="true"  
  length="1" />
```

```
digester.addObjectCreate("chain-element", "com.package.BaseChainElement", "className");  
digester.addSetProperties("chain-element");
```
