

ValidatorXmlFile

I want an argument in my xml field-element, for the max and min length validation. I have done it based on the dtd file but it doesn't work. The validator doesn't get the value. So I get a nullpointer exception.

How must I write the argument in the field element?

```
<field property="name"
  depends="required,minlength,maxlength">
  <arg0 key="register.validate.name"/>
  <arg1 name="minlength"
    key="{var:minlength}"
    resource="false"/>
  <arg1 name="maxlength"
    key="{var:maxlength}"
    resource="false"/>
  <var>
    <var-name>minlength</var-name>
    <var-value>1</var-value>
  </var>
  <var>
    <var-name>maxlength</var-name>
    <var-value>255</var-value>
  </var>
</field>
```

Where:

- Arg0 is the argument for all 3 rules - required, min & max len.
- Arg1 name="minlength" is used by minlength
- Arg1 name="maxlength" is used by maxlength
