

API Bindings for Tika

Application Programmer Interface (API) Bindings for Tika

Apache Tika ships with bindings in Java (its core implementation language), .NET (basic support), along with a command line interface, a REST (JAX-RS) server, and a GUI for exposing Tika functionality. However, many developers are actively creating bindings downstream of Tika. This is a page that collects links to those bindings. Thank you to the developers that are bringing Tika to the masses!
