

# SQLite Parser

## SQLiteParser

**NOTE:** As of Tika 1.9, the tika-app.jar and the tika-server.jar no longer bundle/include the `xerial.org` dependency; we moved this to `<scope>provided</scope>` because it includes native libraries. You need to add that jar/dependency to your project to parse SQLite files!!!

To figure out what version of `xerial.org`'s `SQLite-jdbc` you need, look at the pom under tika-parsers. Then add the dependency to your project like so:

```
<dependency>
  <groupId>org.xerial</groupId>
  <artifactId>sqlite-jdbc</artifactId>
  <version>3.8.10.1</version>
</dependency>
```

or grab the right [jar](#) from Maven central.
