BoardReport-August2016

Apache Turbine Project Board Report, August 2016

Apache Turbine is a servlet based framework that allows experienced Java developers to quickly build web applications. Turbine allows you to personalize the web sites and to use user logins to restrict access to parts of your application.

Turbine is a matured and well established framework that is used as the base of many other projects.

Status

The Turbine project has again some increased activity in the last quarter.

The Turbine project has no board-level issues at this time.

Community changes

No new committers were voted in since the last board report.

The last change to the committer base was the addition of Georg Kallidis (2012/09/19).

No new PMC members were voted in since the last board report.

The last change to the PMC was the addition of Georg Kallidis (2013/09/30).

Turbine core project

We are in the process of migrating old applications to the new Turbine framework. It turns out that a number of bugs have to be fixed, mostly in supporting Fulcrum components. Also the new security model showed some weaknesses which need to be addressed.

The last released version was Turbine 4.0-M2 (2015/12/22).

Fulcrum component project

Some bigger changes to the Fulcrum Security component. A few bugfixes to others. A new release of Fulcrum Security Torque will probably require a Torque 4.1 release first.

The last released component was Fulcrum Yaafi 1.0.7 (2015/10/09).
