

BoardReport-February2012

Apache Turbine Project Board Report, February 2012

Apache Turbine is a servlet based framework that allows experienced Java developers to quickly build web applications. Turbine allows you to use personalize the web sites and to use user logins to restrict access to parts of your application.

Turbine is a matured and well established framework that is used as the base of many other projects.

Status

The Turbine project has as usual seen low levels of activity in the last quarter. Some progress on several topics could be achieved during [ApacheCon NA](#) in Vancouver.

The Turbine project has no board-level issues at this time.

Project Branding Board Report Checklist

The last issue left is

- TODO: Logos and Graphics : include TM

Community changes

No new committers were voted in since the last board report.

No new PMC members were voted in since the last board report.

Turbine core project

Some discussion has been taken place whether to remove the dependencies on projects that went to the attic (ECS).

No beta or final releases were made since the last board report.

Fulcrum component project

Work on migrating the build process of the Fulcrum components to Maven 2 continues. Some bugfixing and enhancements have been done in the fulcrum-intake and fulcrum-parser projects.

No beta or final releases were made since the last board report.

META project

There has been no activity on the META sub-project in this quarter.

No beta or final releases were made since the last board report.

It is planned to close down the sub-project META in favor to the support of Maven-2 archetypes.
