

BoardReport-February2013

Apache Turbine Project Board Report, February 2013

Apache Turbine is a servlet based framework that allows experienced Java developers to quickly build web applications. Turbine allows you to use personalize the web sites and to use user logins to restrict access to parts of your application.

Turbine is a matured and well established framework that is used as the base of many other projects.

Status

The Turbine project has as usual seen low levels of activity in the last quarter.

The Turbine project has no board-level issues at this time.

Project Branding Board Report Checklist

The last issue left is

- TODO: Logos and Graphics : include TM

Community changes

No new committers were voted in since the last board report.

No new PMC members were voted in since the last board report.

Turbine core project

The Turbine core project proceeds slowly to the next milestone release which shall include a modified security implementation and support for the Quartz scheduler to replace the built-in one.

The following components have been released in the last quarter

- Turbine Parent POM, version 2
- Maven Archetype for a Turbine 2.3.3 web application
- Maven Archetype for a Turbine 4.0 web application (based on Turbine 4.0M1)

The Turbine project has not yet switched its site publication method. We are working with Infrastructure to sort this out.

Fulcrum component project

There has been no activity on the Fulcrum sub-project in this quarter.

No beta or final releases were made since the last board report.
