

HelpOnConfiguration EmailSupport

Enabling Email Support

Setting "mail_smarthost" and "mail_from" in the configuration activates features that are explained below. These features are otherwise not available, since there are no general defaults.

mail_from

`${renderedContent}`

mail_smarthost

`${renderedContent}`

mail_login

`${renderedContent}`

See also [HelpOnConfiguration](#).

Email Features

[MoinMoin](#) currently offers two email-based services, which are explained in the following sections.

Sending Login Data

If emailing is available, the [UserPreferences](#) dialog is expanded with a field "<<GetText(Your email address)>>" and a button "<<GetText(Mail me my account data)>>". The user can enter the email address he provided at registration and then gets an email containing all necessary data to re-login, after clicking the button.

Change Notification

Any user can subscribe to changes of wiki pages by either clicking on the envelope icon <<Icon(moin-email.gif)>>, or by adding a regex to the "Subscribed wiki pages" field of his [UserPreferences](#). The system then sends, whenever a page is changed and the author doesn't uncheck the "<<GetText(Send mail notification)>>" checkbox, an email with the author, a link to the page, and the diff of the change.
