

HelpOnNavigation

Navigation

The header on each page allows you to go to the [FrontPage](#) (home), [RecentChanges](#) (recent modifications), [TitleIndex](#) (index of all the page titles), [WordIndex](#) (index of all the words in the page titles), [SiteNavigation](#) (list of navigation tools), and [HelpContents](#) (main help page).

On the upper right you find icons for the most often used functions:

- `<<Icon(moin-parent.gif)>>` jumps to the parent page, and is only shown if you are on a subpage (see [HelpOnEditing SubPages](#))
- `<<Icon(moin-show.gif)>>` refreshes the current page
- `<<Icon(moin-print.gif)>>` shows a printable version of the page without the header or footer
- `<<Icon(moin-xml.gif)>>` creates a XML version of the page (currently still experimental, creates [MoinMoin:StyleBook](#), a [MoinMoin:DocBook](#) variant)
- `<<Icon(moin-email.gif)>>/<<Icon(moin-email-x.gif)>>` allows to subscribe to email notifications for the current page, the brighter version means you have already subscribed to a page
- `<<Icon(moin-edit.gif)>>` allows you to say something, i.e. edit the page
- `<<Icon(moin-info.gif)>>` shows meta information about the page, especially the full version history
- `<<Icon(moin-diff.gif)>>` shows changes between the current version and the previous version of the page
- `<<Icon(moin-search.gif)>>` shows the search page.
- `<<Icon(moin-help.gif)>>` shows the help page
- `<<Icon(moin-home.gif)>>` links to a user's homepage, if the user is logged in and a page with his login name exists

Clicking on the Page Title link located in the header above will show every page that references this page. A sample use of this back-referencing, inverted-links feature is the categorization of pages, i.e. [CategoryHomepage](#). On the bottom of each page, you find the "traditional" edit and search links known from the original wiki, and in addition fields for quick-searching titles and the page texts, plus links to call any custom actions you have installed.
