January 2010

This is the inaugural Click board report.

We have recently submitted https://issues.apache.org/jira/browse/INFRA-2425 to migrate Apache
Click from the incubator to a TLP. Once the project has been migrated
we will release Apache Click 2.1.

There has been an up kick of activity of late with new community
members, bug fixes and ideas. There has also been an book has been
published "Getting Started with Apache Click" http://www.fdaoud.com/clickbook/.

I think 2010 is going to be a very good year for Apache Click.
