

BandwidthLimiting

Suppose you don't want your Windows Apache2 server uploading more than 64 kB/s. Then follow these instructions:

1. Download http://www.ivn.cl/apache/files/dlls/mod_bw-0.8-2.2.6/mod_bw.dll to C:\Program Files\Apache Software Foundation\Apache2.2\modules
2. Open C:\Program Files\Apache Software Foundation\Apache2.2\conf\httpd.conf with notepad.
3. Where you've got the big long list of [LoadModule](#) lines, add the following to the end:

[LoadModule](#) bw_module modules/mod_bw.dll

[BandWidthModule](#) On

[ForceBandWidthModule](#) On

[BandWidth](#) all 65536

4. Save the edit and restart the server.
