InvalidCommandAuthDigestFile

Invalid command 'AuthDigestFile', perhaps misspelled or defined by a module not included in the server configuration

This error message is likely to appear, if you are using Apache 2.2, and are still using AuthDigestFile in your config file.

You should be using AuthUserFile instead. This only applies if you are using Apache 2.2.

For example:

```
<Location /private/>

  AuthType Digest
  AuthName "private area"
  AuthDigestDomain /private/ http://mirror.my.dom/private2/

  AuthDigestProvider file
  AuthUserFile /web/auth/.digest_pw
  Require valid-user

</Location>
```
