

ModuleConfigHelperAPI

ap_set_flag_slot

This sets a field within a structure to either 1 or 0.

Example

```
AP_INIT_FLAG(  
    "ModExampleFlag",  
    ap_set_flag_slot,  
    (void *)APR_OFFSETOF(mod_example_config_rec, someFlag),  
    RSRC_CONF,  
    "Description of this directive"  
)
```

Display

This directive would set the field named someFlag within the struct mod_example_config_rec to either 0 or 1 based on the value specified in the Apache configuration files.
