BrutusConfig RequestANightlyBuild

BRUTUS NO LONGER RUNS NIGHTLY BUILDS

Brutus runs gump. Gump should ideally not be used for generation of nightly builds, since its not very safe. You **could** be tempted to set up your own nightly builds in your shell account on minotaur, but *you really shouldn't*. Minotaur runs vital services for us (like the websites, cvs and svn) and is not intended for cpu crunching. If you would like us to set it up for you on brutus, read this page, then add your request below using the template provided. *Disc laimer:* all this is currently just an experiment, and no-one knows if we're going to keep offering this service...

Template

$project-$subproject

```
On behalf of:    $PMC
Request by:      $Person
repository type: (svn|css)
module name:     $project
subdirectory:    $subproject
build type:      (ant|maven)
build target:    (jar|site|dist|....)
output url:      http://brutus.apache.org/~nightlybuild/builds/$project/
```

Pending requests

add your request below....

Activate nightly builds

excalibur-site

```
On behalf of:    Excalibur PMC
Request by:      Leo Simons
repository type: svn
module name:     excalibur
subdirectory:    trunk/site
build type:      maven
build target:    site
output url:      http://brutus.apache.org/~nightlybuild/builds/excalibur/
```

excalibur-jars

```
On behalf of:    Excalibur PMC
Request by:      Leo Simons
repository type: svn
module name:     excalibur
subdirectory:    trunk
build type:      maven
build target:    multiproject:install
output url:      http://brutus.apache.org/~nightlybuild/builds/excalibur/
```

Admin Howto

```
ssh brutus.apache.org
su - nightlybuild
echo 'build (cvs|svn) (ant|maven) $target $project $dir' > ~/etc/cron.d/$i$j-build-$project-$subproject.sh
```
