AvalonMeta

(this page is part of the ApacheAvalon project; see AvalonProjectPages for details)

Component Meta Model

The Meta Model is an object model describing a type of Avalon component. The meta model encompasses all information about a component that is not specified by its work interface and/or lifecycle interfaces. Specifically, the Meta Model allows for specification of lifecycle-related constraints/requirments, ie Context, Configuration, Parameter, and Dependency constraints/requirments.
