

AboutTheBuildTargets

This is all from the output of `build -projecthelp`.
Updated April 3, 2003 for new build system. – [TonyCollen](#)

Target	Description
clean	Cleans the cocoon build and the webapp
clean-cocoon	Cleans the cocoon build
clean-webapp	Cleans the webapp
dist	(admin) Builds the distribution
distclean	Cleans everything and brings back to original 'CVS checkout' state
docs	Builds the documentation
eclipse-project	Generate the Eclipse project files
emacs-project	Generate the Emacs project files
forrest	Generates static HTML documentation
idldocs	Builds the IDL API documentation for non-java language bindings
javadocs	Builds the API documentation (javadocs)
printer-docs	Builds printer-friendly documentation
test	Runs all tests
war	Builds web application archive
webapp	Builds web application folder

If you wish to build the .war file without any of the samples, you can use `build clean-webapp` and then copy the resulting .war file to your webapps directory.

It might also be good to copy `build.properties` to `local.build.properties` and edit it to exclude the samples, docs, etc to your liking.

cocoon 2.1.6

`build.sh -projecthelp` in 2.1.6

Target	Description		
Woody2CocoonForms	Updates from Woody to CocoonForms		
anteater-test	Runs a single Anteater test		
anteater-tests	Runs AntEater tests		
clean	Cleans the cocoon build, webapp and standalone-demo		
clean-cocoon	Cleans the cocoon build		
clean-dist	Cleans everything and brings back to original 'CVS checkout' state		
clean-standalone-demo	Cleans the standalone-demo		
clean-webapp	Cleans the webapp		
core-anteater-tests	Runs anteater tests		
correctLinefeed	Make sure LF is used as line feed		
custom-conf	Uses Cocoon's xpatch task to customize runtime configuration		
<ac:structured-macro ac:name="unmigrated-wiki-markup" ac:schema-version="1" ac:macro-id="aaba5015-a9f5-4927-954a-abbac5bb61d"><ac:plain-text-body><![CDATA[dist	[admin] Builds the distribution]]></ac:plain-text-body></ac:structured-macro>
docs	Builds the documentation		
eclipse-project	Generate the Eclipse project files		
eclipse-webapp-prepare	Prepares the webapp directory to make it usable within Eclipse		
emacs-project	Generate the Emacs project files		
forrest	Generates static HTML documentation		

javadocs	Builds the API documentation (javadocs)		
junit-tests	Runs JUnit tests		
<ac:structured-macro ac:name="unmigrated-wiki-markup" ac:schema-version="1" ac:macro-id="852d793d-d019-4cd6-a925-a75b24943641"><ac:plain-text-body><![CDATA[site	[admin] Builds the site]]></ac:plain-text-body></ac:structured-macro>
standalone-demo	build webapp and copy files for standalone demo		
test	Runs all tests		
validate-sitemaps	Standalone target to validate all sitemaps		
validate-stylesheets	Standalone target to validate all stylesheets		
war	Builds web application archive		
webapp	Builds web application folder
