

AntonioGallardo

My name is Antonio Gallardo from Managua, Nicaragua.

I started to using Cocoon in August 2002. I am developing web Applications using Linux, Tomcat, [PostgreSQL](#) and Cocoon.

I believe Cocoon will become a great revolution in webapp development!

Currently, I am trying to use a [Model-View-Controller](#) (MVC) design paradigm. For the **Controller**, the candidate is [ObjectRelationalBridge](#), for the **Model** the idea is to interact with [<http://db.apache.org/ojb/>] (OJB) using [Java Data Objects](#) (JDO). The **View** will be implemented using [Woody](#).

June 2005

Mentoring [XUL based user interface for Cocoon forms project](#) of the [GoogleSummerOfCode2005](#)

October 2003

16-October: [Druid](#) now is able to generate Apache OJB repository.xml and *.jdo files! I also included an build.xml file to create a jar archive with the generated JDO Beans.

The initial idea using the MVC design paradigm with Cocoon is viable. Currently I am working more with Flow, Woody and trying to get on feets the new OJB block using JDO. Stay tuned!

September 2003

16 Sept-2003 - I become Cocoon and Forrest committer!
