

BeanScriptingFramework

The Bean Scripting Framework provides Java programs with access to a number of different scripting languages using a single common API.

Languages that are supported by BSF currently include:

- [BeanShell](#) - scripting language that resembles and interpreted form of Java
- JavaScript - via [Rhino](#)
- [Python](#) - via [Jython](#)
- REXX - via NetRexx
- Ruby - via JRuby
- Tcl - via Jacl
- [XSLT](#) - via [Apache Xalan](#)

For more information on BSF, see the [Jakarta Bean Scripting Framework](#) home page.
