BlockManagement

Working with Cocoon Blocks needs management tools to build and to deploy them. WARNING: Currently those tools are under development in http://svn. apache.org/repos/asf/cocoon/whiteboard/ (block-builder and block-deployer) and they are not (fully) functional.

Following documents are written as user documentation but as the functionality doesn't exist it should be considered as some kind of specification.

- BlockBuilder
- BlockDeployer

If you're interested in technical details of the implementation, checkout following documents:

- BlockBuilderDevDoc
- BlockDeployerDevDoc

And finally a document proposing a (smooth) migration strategy from the current build system to a block-centric one:

- BlockMigration
