

# BlockStatusPoll

We have to decide about the status of each block. So far we agreed on

- core
- supported
- unsupported

Here is the list of all blocks - please add your name where you can provide support for the block. (Of course, adding your name doesn't mean that you have to provide support for a block for now and forever. It should only give us an impression on which blocks we as community can support in the future and which not.)

Also, if you do not consider yourself knowlegded enough to provide support for a given block but think it is usefull and you could easily learn about it, add your name withing parenthesis.

block name	supported by	comments
apples	BRD, (LG)	Apples is actively used inside Daisy so the code is pretty solid and will be maintained/supported when needed.
asciart		
authentication-fw	AG, CZ,	
axis	(GP)	
batik	CZ, VG, SW, AG, AN, JBQ
