What is a coplet?

A coplet is a COcoon PortLET. Coplet is a component in the Cocoon Portal framework (deprecated) and in the Cocoon Portal block (new). The Cocoon web page on portals (<http://cocoon.apache.org/2.1/developing/portal/>) gives details.

Why this page?

This page doesn't seem to be much more than a definition and a link. Why bother?

It was written because the author had a hard time finding out what a coplet was, through existing means. Hope it helps you.
