

Debugging Cocoon Apps

Debugging Cocoon Apps

- TARGET-AUDIENCE: ***beginner*** advanced expert
 - COCOON-RELEASES: written for 2.1.7, but should apply to 2.1.* in general
 - DOCUMENT-STATUS: ***draft*** reviewed released
-

What you will get from this page

Links to information on how to debug Cocoon-based web applications.

Technical prerequisites

Knowledge of sitemap concepts.

Links to other information sources

See:

- [DebuggingWithViews](#) (but views have limitations when you're dealing with pipelines calling other pipelines)
- [DebuggingXMLandXSLTransformation](#)
- [DebuggingWithProfiler](#) (lets you view the XML passed from one component to another)

For debugging the Cocoon **framework**, at the java level:

- [DebuggingCocoon](#)
 - [DebuggingCocoon2.2](#)
