

# EditPageHelp

Here's a short reminder on what elements you have at your disposal (see [TextFormattingRules](#) for more info):

```
----          Horizontal ruler
\\           Forced line break
[link]       Create hyperlink to "link", where "link" can be either an internal
             WikiName or an external link (http://)
[text|link]  Create a hyperlink where the link text is different from the actual
             hyperlink link.
[text|wiki:link] Create a hyperlink where the link text is different from the
             actual hyperlink link, and the hyperlink points to a named Wiki.
             This supports interWiki linking.

*            Make a bulleted list (must be in first column). Use more (**)
             for deeper indentations.
#            Make a numbered list (must be in first column). Use more (##, ###)
             for deeper indentations.

!, !!, !!!   Start a line with an exclamation mark (!) to make a heading.
             More exclamation marks mean bigger headings.

__text__     Makes text bold.
'text'       Makes text in italics (notice that these are single quotes ('))
{{{text      
```

Makes text in monospaced font. ;term: def Defines 'term' with 'def'. Use this with empty 'term' to make short comments.

text	more text	Makes a table. Double bars for a table heading. }}}
------	-----------	--

Don't try to use HTML, since it just won't work.

To embed images just put them available on the web using one of the approved formats, and they will get inlined automatically. To see the list of approved formats, go check [SystemInfo](#).

To make a code block, use triple {'s to open, and triple }'s to close.

*(Wondering where this text comes from? It's on a page called [EditPageHelp](#), which you can edit too!)*
