

JanHinzmann

update: I'm now writing my masters thesis at Deutsches Zentrum für Luft- und Raumfahrt e.V.

I'm a student of *Bachelor of Science in applied computer science* at the University of Hannover, Germany.

I'm working on a web service for the registration of meta data. This will be realized with

- apache, tomcat, cocoon, axis

at the moment i have achieved the web interface, and am providing one out of four web service tasks through the included axis block. In the scope of my bachelors thesis I'm now refactoring this, so that all task will be provided with pure cocoon.

My first discussion on the mailinglist led to an entry in this wiki <http://wiki.apache.org/cocoon/Flow?highlight=%28JanHinzmann%29> 😊

My further interest is shown here: [WebServiceServer](#)
