

MovedToCvs

This page explains what happens when Wiki pages are moved to the "official" CVS docs.

See [CocoonFeatures](#) for an example of a page which moved.

Here's what happens:

- The contents of the Wiki page are replaced with a note which points here.
- The note includes a link to the page on the main Cocoon site.
- The Wiki page can still be used for comments (until we have a better solution for this).
- People are expected to provide [patches](#) for further corrections to the page.
