PortalToolsCodingStandards

PortalToolsCodingStandards

- Use camelCase-names for id's etc.
- The folder and package name of your plugin should be the id
- Put the forms in the folder form and create for each form a subfolder with its name
    - Form.xml
    - Binding.xml
    - Template.xml
- Put JXTemplates in a folder called jx
    - Use the JXPath-Syntax (#{./foo/bar})
- I18n-keys start with the tool-id (e.g. copletManagement.*)
- If the i18n text belongs to a specific function append the function name (e.g. copletManagement.editCoplet.*)
- Have a look at the samples if something is not clear 🙂
