

PortalToolsPtJs

PtJs

ptm.js is the main F'lowScript for the [PortalTools](#) framework. At the moment it does not contain much, but it might be extended if it is possible to use intercepted flow or something similar.

- Imports required packages
- Imports Form.js
- Adds short functions to get and release the P_ortalToolManger
 - getPTM();
 - relPTM(toolManager);

This file should be imported into a Flow:

```
cocoon.load("resource://org/apache/cocoon/portal/tools/ptm.js");
```
