

RtfGeneration

How to generate RTF from Cocoon

Currently the information is found at <http://jfor.sourceforge.net/>.

The jfor license was recently changed to allow jfor to be distributed with Cocoon, so RTF generation should be a standard feature from the Cocoon release that follows 2.0.3.

Reader comments

- Bear in mind that the Cocoon will not "automagically" generate RTF - you still need to write an intermediate stylesheet to convert XML to XSL:FO.
- *What about POI?* – Anonymous author

** For info on POI, see [ExcelGeneration](#)

- Alternative to jfor: We found too many limitations in jfor and have used a product from <http://www.xmlmind.com>. It is a commercial product so you have to pay for it, but it does have fewer limitations and support is included. The new version is easy to integrate in Cocoon – Ulf
