

SamplesRefactor

The Cocoon samples have been undergoing re-organisation for a long time. This is an effort to finalize the samples before the Cocoon-2.1 release.

- The list was prepared by following links on the webapp and by looking at the filesystem (some samples might not be properly linked).
- Reviewed current cocoon-2.0.5-dev and listed all samples (done).
- Reviewed an old .war from during the build re-structure (2003-02-21) and listed other samples (done).
- Reviewed a version of 2.1 head just before the build re-structure
cvs checkout -D "2003-02-17 10:00:00 GMT" cocoon-2-historical

... strange ... this does not build (so not yet done).

- Reviewed current cocoon-2.1-m2-dev (not yet done).
- Not yet tested all samples in both branches.

Notes:

- This is a work-in-progress. The table below may be incomplete.
- Please write your initials in the "notes" column if you put "yes" somewhere, it might be useful to know who tested what. See list of initials at the end of this page.
