Meetings

Lenya User Meeting Spain 2004 - We are planing a user meeting in Spain! Come and check it out!

Wiki pages

GetStarted

- GetStarted - This site is for cocoon user who are trying to get started with cocoon developing.
- GETlenya written in cooperation with other Lenya committer

Parsing, generator, converting, database, transformation:

streams:

- ScherlerHtmlParsing

converting date:

- XSPTransformCustomDate - If you are using <esql/> you may need to transform a custom date string to a valid Java Date object.

example for a transformation:

- Jars2exclude - You will learn how to write a xsl transform that will remove certain XML-elements. This transform is capable of exceptions. I wrote that for cocoon 2.0.3. With 2.1.* the blocks are easy2exclude but still a good example for a transformation.

some database stuff:

- SQL
  - SQLdifferenceESQL
  - SQLpreparation
  - ESQL-links

Marshaling:

- BetwixtTransformer - Betwixt transformer marshals an object from the Sitemap, Session, Request or the Context into a series of SAX events.
- betwixt - The Betwixt library provides an XML introspection mechanism for mapping beans to XML in a flexible way. It is implemented using an XMLIntrospector and XMLBeanInfo classes which are similar to the standard Introspector and BeanInfo from the Java Beans specification.

i18n:

- Cocoon Userdoc

generator:

- html-generator - Technical document, that describes the html generator of Cocoon.

King regards

Thorsten Scherler
