

SimpleSelector

SimpleSelector

A very simple selector that operates on string literals, useful especially in conjunction with input modules.

Example

```
<map:selector name="simple" src="org.apache.cocoon.selection.SimpleSelector"/>

<map:select type="simple">
  <map:parameter name="value" value="{request:method}"/>
  <map:when test="GET">
    ...
  </map:when>
  <map:when test="POST">
    ...
  </map:when>
  <map:when test="PUT">
    ...
  </map:when>
  <map:otherwise>
    ...
  </map:otherwise>
</map:select>
```
