

# WebServices

This page should give an overview of the different implementations with the goal to integrate WebServices in Cocoon. It should also be a starting point for a discussion to unify all our WebServices efforts and to give our users clear instructions what implementation should be used and which ones are deprecated.

## design goals

- share base implementations across different implementations
- webservices != SOAP
- ...

## Use cases

- use Cocoon as [WebServiceServer](#) – a draft by [JanHinzmann](#)
  - use Cocoon as WebService client
- 

## Different implemetations

- [FlowAndWebServices](#) - API for Flowscripts to integrate WebServices into your Flowscripts.
- [SOAPLogicsheet](#) XSP-implementation
- Axis block
- [Transformer I](#) by Daniel Fagerstrom
- [Transformer II](#) by Tony Culshaw, available as a [donation](#) in the bugtracker
- [Transformer III](#) by Steve Punte
