JakartaCommonsProjectPages

Jakarta-Commons

See http://jakarta.apache.org/commons.

This subproject is dedicated to creating reusable components in java.

JakartaCommonsEtiquette contains observations and opinions aimed at explaining some of the peculiarities of Jakarta Commons.

- Q:* Little request: Can we PLEASE have a single javadoc tree for all commons components? I am getting tired of switching between dbcp, loggin, and pool. Especially when I am following one line of calls or inheritance. Thanks, Angus
- A:* Sure, it should be relatively easy, why not take some initiative and do it yourself?

Components

On this wiki:

- BetwixtComponentPage
- CodecProjectPages - Codec contains text encoders and decoders
- CommonsNet
- DbCpPage
- HttpClient
- ValidatorProjectPages - Validator provides components for user input validation
- Digester

On the commons site:

- http://jakarta.apache.org/commons/components.html

Sandbox

TheSandbox is an open workspace for jakarta committers. This is also divided into components.

Components

On this wiki:

- ResourcesProjectPages

Other Documentation

- MovingFromSandboxToProper
- CreatingStandardWebPresence
- JakartaCommonsDataBeans
- GettingInvloved - General Documentation for all Apache Commiters and ReleaseManager concerning various subjects (like SigningReleases, MavenRepository, and Mirroring)
