

JakartaRegexp

This is the main wiki page for Jakarta's Regexp package (which can be found here: <http://jakarta.apache.org/regexp/>)

This page is work in progress, and will fill out over time with more user contribs.

My main reason for creating this page was to have a place to put a [RegexpKeyedMap](#) class - a Java Map that allows keys to be regular expressions. For details, please visit the [RegexpKeyedMap](#) page.
