CategoriesForFileDocumentation

Here's a suggestion for a formal documentation structure to help Lenya users grok the directory hierarchy and the interaction of files in Lenya. Ideally, each file gets a comment header and each directory contains a README file that will list the following information for files and directories respectively:

parsed during

    ${renderedContent}

parsed by

    ${renderedContent}

scope

    ${renderedContent}

overrides

    ${renderedContent}

can be overriden by

    ${renderedContent}

manual modification

    ${renderedContent}

manual modification implies

    ${renderedContent}

modified/generated by

    ${renderedContent}

If we can agree on a scheme like this, we might eventually apply it to solve the mysteries of DirectoryStructureLenya2.0-HEAD.
