JcrContentModel

Best Practises for Content Models

- Simple
- Self-explanatory
- http://wiki.apache.org/jackrabbit/DavidsModel

Fundamental Decisions

Native JCR UUIDs vs. artificial UUIDs

- - o Automatic referential integrity checks
 - Find links to a page using Node.getReferences()
 - UUIDs generated by repository
- Artificial:
 - More flexibility re. modelling translations (multiple nodes can share a UUID)
 Lenya 2.0.* repositories can be directly migrated
- Combination
 - Native JCR UUIDs for referential integrity
 - Lenya UUIDs for internal links

Referential integrity check (via reference properties) for internal links?

- Issues:
 Pages containing links to non-published pages can't be published
 Acceptions will fail (e.g. deactivation)
- Probably does more harm than good.
- Draft
- Site Structure
- Areas
- Translations
