

ProjectDemo

We now have the option of running current demos of Lenya on ASF infrastructure in [our own zone](#). This has all sorts of great potential:

- an easy showcase for 1.2 and 2.0
- validation of nightly builds
- staging for Documentation experiments
- performance testing (especially with [DTrace on Solaris 10](#))

To pull this off, lots of things need to happen:

- nightly build scripts that also clean out and restart the various Lenya instances
- mod_proxy setup for 1.2 and 2.0
- [install JDK 1.5 workarounds](#)
