

# TagLibDraft

Some tags that could be useful (expanded by a transformer):

## Meta Data

```
xmlns:meta="http://apache.org/lenya/metadata/1.0"
```

---

Example:

```
<title>
  <meta:firstvalue
    namespace="http://purl.org/dc/elements/1.1/"
    element="title"
    document="lenya-document:..." />
</title>
```

Result:

```
<title>Hello World!</title>
```

---

Example:

```
<meta:values
  namespace="http://purl.org/dc/elements/1.1/"
  element="title"
  document="lenya-document:..." />
```

Result:

```
<meta:values
  namespace="http://purl.org/dc/elements/1.1/"
  element="title"
  document="lenya-document:..." />
<meta:value>value1</meta:value>
<meta:value>value2</meta:value>
...
</meta:values>
```

---
