

AmavisdNewTrouble

I'm having trouble with [SpamAssassin](#) and amavisd-new.

Your first port of call – even before reading the SpamAssassin [FrequentlyAskedQuestions](#) list – should be [the amavisd FAQ list](#).

Amavisd intercepts configuration settings, so a lot of the [SpamAssassin](#) documented ways to set configuration work slightly differently under amavisd. It's very important that you understand what amavisd does in these case, so be sure to read that product's documentation and FAQ before asking questions about SA.
