

BayesSqlClearUsers

Clearing a Bayes SQL user

(pasted from a mail 😊)

You shouldn't check mail for non-existent users.

The best way to clear this data is via sa-learn.

```
sa-learn -u <nonexistent user> --clear
```

You can get a list of usernames from the bayes_vars table, it is not the id column it is the username column.

If you don't really have the ability to not check mail for non-existent users you might want to check out this plugin: <http://wiki.apache.org/spamassassin/AuthzUserPlugin>
