

# IntegratedInMua

## Integrated into several varieties of MUA

It's possible to use [SpamAssassin](#) with every MUA (Mail User Agent) which supports some kind of "pipe through" filter.

## Integrated in KMail

For current versions of KMail there's a description on the [KMail Tools](#) page. The next version of KMail shipped with KDE-PIM 3.3 will have an antispam-wizard which makes building the filter rules a thing of three clicks.
