

SpamFuProxy

SpamFu Proxy

It is a free and opensource (at least Lite version) Windows [SpamAssassin](#) Pop3 proxy, currently working with [SpamAssassin](#) 3.0.2

As indicated in its home page (<http://spamfu.net/>):

[SpamFu](#) Proxy: is intended to be a replacement for saproxypro, as it has been announced that there were no further plans to develop or sell saproxypro.

[SpamFu](#) Proxy is intended to fill the void, and was built to be the functional equivalent of saproxypro.

[SpamFu](#) Proxy uses the same set of open-source scripts (pop3proxy.pl and sa-learn.pl), the same conversion tools (dbxconv.exe and readpst.exe), and the same libraries (SpamAssassin, DCC and Razor) that saproxypro used.

Future [SpamFu](#) tools may cost money, but a "Lite" version of [SpamFu](#) Proxy will always be available free-of-charge.

Additionally, we (SpamFu people) are committed, as much as possible (? , by wiki page editor), to keeping the underlying source code open and easily accessible. In general this will include everything but the GUI itself.

As per author email in as per <http://sourceforge.net/mailarchive/forum.php?forum=spamassassin-saproxy>:

- human author of saproxypro
- It is free, and always will be; Everything except the GUI itself is open source.
- It's got a nice installer that will migrate your SAPP settings if you have them.
- It currently utilizes a slightly modified [SpamAssassin](#) 3.02
- The version numbers of [SpamFu](#) will always coincide with [SpamAssassin](#)'s
- Please download it and beat on it and give feedback.
- a wiki will be set up in the next few weeks to make communications easier.
- Also, none of the work is checked back in to SA's SVN repository. If anyone wants to take on that chore, feel free.

Source Code

Forward looking to a be able to provide a sourceforge or equivalent project page ... 🙄 (comment of the wiki page editor)

Download

[SpamFu](#) Proxy 3.0.2 beta (reale seen on March 4th 2k5) can be freely downloaded from <http://spamfu.net/>

User Experiences

Seem to be positive as per <http://sourceforge.net/mailarchive/forum.php?forum=spamassassin-saproxy>
