

SubjectRewrite

SubjectRewrite in 3.0.x

The syntax for enabling Subject rewriting has changed in 3.0.x, it is now a more generic `rewrite_header` option.

This is documented in the [UPGRADE file](#):

- The "rewrite_subject" and "subject_tag" configuration options were deprecated and are now removed. Instead, using "rewrite_header Subject [your desired setting]". e.g.

`rewrite_subject 1`

`subject_tag ****SPAM(SCORE)****`

becomes

`rewrite_header Subject ****SPAM(SCORE)****`

Warning: if you are running SA through amavisd or qmail-scanner, those apps do their own message rewriting and [SpamAssassin](#) cannot perform these rewrites. [Here](#) is the FAQ entry for how to rewrite the subject in qmail-scanner.
