

SvnBranches

[*http://svn.apache.org/repos/asf/spamassassin/trunk/](http://svn.apache.org/repos/asf/spamassassin/trunk/)*

Used to store current active development code and rules. Normally in Commit-Then-Review for changes.

[*http://svn.apache.org/repos/asf/spamassassin/branches/3.2/](http://svn.apache.org/repos/asf/spamassassin/branches/3.2/)*

3.2 code maintainance branch. In Review-Then-Commit mode.

[*http://svn.apache.org/repos/asf/spamassassin/rules/branches/3.2/](http://svn.apache.org/repos/asf/spamassassin/rules/branches/3.2/)*

3.2 rules maintainance branch. When "sa-update" downloads updates, this is what those are built from. Note that the rules files in this now differ in subtle ways from the rules in the 3.2 code dir; please do not simply copy entire files, but diff/patch changes across. (this is painful, which is why we're not doing it this way for 3.3.x.)

[*http://svn.apache.org/repos/asf/spamassassin/branches/3.1/](http://svn.apache.org/repos/asf/spamassassin/branches/3.1/)*

3.1 code maintainance branch. In Review-Then-Commit mode.

[*http://svn.apache.org/repos/asf/spamassassin/rules/branches/3.1/](http://svn.apache.org/repos/asf/spamassassin/rules/branches/3.1/)*

3.1 rules maintainance branch. When "sa-update" downloads updates, this is what those are built from.
