

UpgradeTo310

If you meet the terms of their licenses, you can ***re-enable DCC and Razor2** by uncommenting the appropriate lines in `etc/mail/spamassassin/v310.pre`.

If you decide to ***enable Domain{}`Keys** (in the same file), you will need to install `Mail::Domain}Keys` if you don't already have it. It's available via CPAN or directly from <http://www.cpan.org/modules/by-module/Mail/Mail-DomainKeys-0.21.tar.gz>. You should also be aware that the API changed in version 0.80 of `Mail::Domain`Keys` which stops it from working with SA. Patches to fix this are available at http://issues.apache.org/SpamAssassin/show_bug.cgi?id=4623
