

JMeterAddons

JMeter Addons provided by 3rd parties

This page contains details of 3rd party add-ons, for example Maven JMeter plugins and browser add-ons.

Note that appearance on this page does not imply endorsement by the Apache JMeter project. Also, for any assistance with using the software, please contact the supplier, not the JMeter project.

For plugins that can be used with JMeter, please see the [JMeterPlugins](#) page.

Feel free to add details of any relevant add-ons for use with JMeter, but please keep the entries brief.

Build plugins

- [JMeterMavenPlugin](#) - user-contributed plugin for running JMeter in Maven
- <http://www.programmerplanet.org/ant-jmeter/> - Using JMeter from Ant. (now included in JMeter in the extras directory)

Jenkins plugins

- <https://wiki.jenkins-ci.org/display/JENKINS/Performance+Plugin> - This plugin allows you to capture reports from JMeter and JUnit . Jenkins will generate graphic charts with the trend report of performance and robustness.

Cloud related plugins

- <https://github.com/oliverlloyd/jmeter-ec2> - Automates running Apache JMeter on Amazon EC2

DSL

- <https://github.com/flood-io/ruby-jmeter> - Ruby based DSL for JMeter

Browser add-ons

IE addons

- <http://www.badboy.com.au/> - A browser recording tool that can output JMeter test files
- [Toggle IE proxy settings](#) - adds a button to the IE toolbar which enables and disables the proxy

Mozilla Firefox

- [livehttpheaders](#)

Other add-ons

- <https://github.com/ponomandr/jmeter-idea-plugin> - Open JMeter files with JMeter in IntelliJ IDEA
