

# Mike Buzzetti

Describe [Mike Buzzetti](#) here. javascript examples

```
${__javaScript(Math.floor(Math.random() * 200),temp)}
```

Get a random number between 0 and 200, store it in temp (return temp)

```
${__javaScript(rndStocks =Math.floor(Math.random()*('${numberStocks}'));$numberStocks='${numberStocks}' - rndStocks; ,numberOfSellStocks)}
```

Get a random number between 0 and jmeter variable numberStocks then subtract that number from numberStocks returns rndStocks in numberOfSellStocks

Embedded Browser Stuff.

JDIC ( Java desktop ) [BlackBerry](#) (Mozilla) Both above require Mozilla installed and are not very fun

Flyingsuacer A pure java XHTML renderer. Looks Promising.
