Release Highlights

- Ability to specify `overwrite` and `commitWithin` as request parameters when using the JSON update format.
- `TermQParserPlugin`, useful when generating filter queries from terms returned from field faceting or the terms component.
- `DebugComponent` now supports using a `NamedList` to model Explanation objects in its responses instead of `Explanation.toString`.
- Improvements to the UIMA and Carrot2 integrations
- Highlighting performance improvements
- A test-framework jar for easy testing of Solr extensions.
- Bugfixes and improvements from Apache Lucene 3.2
